

The quality of life ,especially at mealtime/early evening has improved since the Do Not Call List has been in effect.

This is very important to those who have young families or elderly persons. Getting up and down to answer calls from callers who are most often rude/demanding can have a negative affect on one's health, especially in those who have high blood preasure / heart conditions. This does not even take into account the risk of falls trying to get to the phone. Please keep the DO NOT Call LIST in effect and help improve eveyones life quality. Thank you
